

THE NEW
VOLVO S90

INNOVATION FOR PEOPLE

Made by Sweden.

At Volvo Cars, we continuously innovate in order to make your life better. Every car, every technology and every design is the result of a clear vision-to put people at the heart of everything we do.

This vision has inspired us to create the likes of the three-point safety belt and side-impact airbags-inventions that have saved lives and changed automotive history. And with our new generation of cars we continue with this tradition.

We understand what's important to people. It forms the basis of all the innovations which we create. Innovations that improve lives.

At Volvo Cars we design our cars around you.

"Underneath the crisply sculpted exterior lies a new chassis that delivers the perfect combination of precise handling and welcome comfort."

THE ART OF CREATION

Where elegance complements technology.

From any angle the S90 looks elegant and powerful. The short overhangs, long wheel-base and low roofline combine to create a solid, sculpted whole that is sophisticated and elegant. The muscular shoulder line is distinctly Volvo, anchoring the car to its heritage while connecting it to the future.

The S90 is packed with innovative technology that has one purpose: to make your life easier, and one principle: it must be easy to use. Elegance, craftsmanship and technology. This is what the S90 is made of.

Classically Volvo, distinctly modern.

Combining powerful proportions with Scandinavian subtlety elevates the S90 beyond the everyday. The long bonnet and low roofline suggest power and grace, while the sculpted shoulder line identifies the S90 as a Volvo.

Small details make a big impact.

Fine detailing and bold shapes combine to create a strong impression. Integrated end pipes add to the design's coherence, while the shape of the LED rear lights gives the S90 real presence, whether moving or stationary.

DESIGNED FOR CONTROL

Precision and accuracy at every touch.

From the moment you settle into the sculpted driver's seat you're in control. You sit low in the S90, with the 9-inch centre display with touch screen angled towards you to create the feeling of a cockpit. You're surrounded by an environment where beautiful materials and advanced technology meet, creating a cabin that looks great and works perfectly. The exceptional craftsmanship enhances the feeling of precision. Take the air vents, inspired by our concept cars.

"Turn the centre display into an extension of your iPhone® using Apple CarPlay™."

Connecting you with a world of entertainment.

Get closer to music you love, no matter which seat you're in. With Sensus Connect all of your music is available all of the time, whether it's direct from your favoured media source or streaming from the internet. It all begins with the 9-inch centre display, the control centre for Sensus. The surface responds to the lightest of touches—you only need to brush your fingers over the glass to operate the controls. It even works with gloved hands.

Premium Sound by Bowers & Wilkins gives every occupant a superb audio experience, no matter which seat they are sitting in. Developed with Bowers & Wilkins, creators of high-end audio, this innovative technology brings exceptional clarity and realism to your favourite music. The unique air-ventilated.

Welcome aboard. This is the new first class: calm, comfortable and beautifully made. A place where the journey is as important as the arrival.

INTELLISAFE

*Intuitive safety by Volvo Cars.
For you, and for those around you.*

At Volvo Cars, safety is an intrinsic part of our DNA. We've invented some of the world's most pioneering life-saving technologies - such as the three-point safety belt that's been acknowledged one of the most important innovations of mankind. But we aim higher. Our vision is the by 2020 nobody should be killed or seriously injured in a new Volvo. IntelliSafe is our approach for a more harmonious relationship between cars and people. To achieve this, we have infused your Volvo with smart, intuitive innovations for a safer drive. And the IntelliSafe technologies help protect not only the people inside your car - we also consider people

City Safety

Blind Spot

Park Assist

City Safety is designed to prevent you from colliding with the car in front if it stops, or slows suddenly. This advanced IntelliSafe system will automatically brake to avoid a collision and works at speeds of up to 31 mph - an accident can be avoided at a speed difference of up to 9 mph to the vehicle in front. Because we also care about other road users, our pedestrian and cyclist detection with full auto brake watches out for people walking in your path or cycling in the same direction as your car and applies the brakes if you're unable to react in time. Our BLIS™ System uses radar sensor technology to alert you to vehicles that are close to or in your blind spots in your adjacent lane. This way, you're far less likely to change lanes when it isn't safe. When you're reversing out of tight parking spaces, our Cross Traffic Alert function watches out for vehicles you can't see.

Safer, more comfortable driving
Every journey is effortless with Adaptive Cruise Control, which automatically maintains a safe distance from the vehicle in front. At speeds below 50 km/h our Pilot Assist technology works alongside this to help you stay in lane with gentle steering inputs.

Bird's-eye view
With 360° Surround View technology you get a bird's-eye view of your car and its surroundings so you can see obstacles all around you. It makes parking and manoeuvring in tight spaces simple.

Apple Carplay
Allowing drivers to seamlessly integrate their iPhone and its apps with the touchscreen display. Not only can the phone be controlled using the touchscreen, but also by Siri voice commands. The S90 will be the first car to offer this functionality.

Helping you turn safely
Our world-first intersection braking technology makes one of the most common - and damaging - types of collision less likely to happen. If you are about to turn into the path of an oncoming car, it detects if a collision is imminent, braking for you to reduce the severity of an impact, or avoid it all together.

Stayin alert
If you are getting drowsy or inattentive at the wheel, Driver Alert Control will alert you and prompt you to take a break. The Rest Stop Guidance function can even tell you where it's safe to stop.

EXPERIENCE A NEW WAY TO TRAVEL.

Travel first class in every seat, every day. Because when you're in the S90 you're in your own private lounge, a place where comfort and luxury combine with technology and craftsmanship. It starts with the front seats. Sculpted to complement the human form, they provide superb support and a wide range of adjustment, so everyone can find their ideal seating position. All you need to do is set your desired temperature and the S90 does the rest. Control functions such as navigation and entertainment right from the steering wheel buttons, while the 12-inch driver display keeps you informed. Beautiful, natural materials such as Linear Walnut complement the car's advanced technology, creating a uniquely contemporary look.

Beautiful, natural materials such as Linear Walnut complement the car's advanced technology, creating a uniquely contemporary look.

In the driver's seat you're in charge. Access control functions such as navigation and entertainment from the steering wheel buttons, while the 12-inch driver display keeps you informed.

Every element of the cabin is crafted to make form and function one. The door handles can be backlit, making them easier to find in the dark.

Protecting what's most important.

Volvo is synonymous with road safety. We put our first safety cage into production in 1944, and created the three-point safety belt back in 1959. And we're still innovating today. Prepared front safety belts tighten automatically if the car detects that a collision is likely, to ensure you're in the safest position should one occur.

The sculpted front seats in the S90 are more than just beautiful to look at. Their unique structure helps to absorb vertical impacts, helping to protect your spine if the car lands heavily after leaving the road or becoming airborne. It's another example of how we make every part of a Volvo work harder for your safety.
